

# OEM Installation Notice

The PowerCenter Administration Console and PowerCenter Client tools contain OEM partner-specific information. You can create or copy text and bitmap files into the PowerCenter installer directories to display the appropriate information after you install PowerCenter. You must create text files and copy bitmap files to the appropriate directory in the PowerCenter installer before you create the final DVD image for installation.

The OEM partner-specific information appears in the following locations:

- **Splash screens.** The splash screens appear when you launch the PowerCenter Client tools.
- **About dialog box.** The About dialog box appears when you click Help > About <tool name> in the PowerCenter Client tools.
- **Title bar.** The title bar for the PowerCenter Client tools.
- **Log events.** The OEM partner name appears in PowerCenter Administration Console log events.

For the PowerCenter Client tools, you must create the \oem directory under the Client directory and copy the necessary files to the \oem directory in the PowerCenter installer. For the PowerCenter Administration Console, you must create the \oem directory under the Server directory and copy the necessary files to the \oem directory in the PowerCenter installer.

The following table lists the text and bitmap files you must create or copy to the PowerCenter installer directories. Locale is the locale setting for the machine where you install PowerCenter. For example, if you install on an English machine, copy pmdesign\_en.bmp to the \Client\oem directory.

Directory	File Name	Description
Client\Disk1\ InstData\oem	pmdesign_<locale>.bmp	Splash screen bitmap displayed when you launch the PowerCenter Designer and in the About dialog box when you click Help > About <tool name> in the Designer.
	pmrepmgr_<locale>.bmp	Splash screen bitmap displayed when you launch the PowerCenter Repository Manager and in the About dialog box when you click Help > About <tool name> in the Repository Manager.
	pmwfmntr_<locale>.bmp	Splash screen bitmap displayed when you launch the PowerCenter Workflow Monitor and in the About dialog box when you click Help > About <tool name> in the Workflow Monitor.
	pmwflmgr_<locale>.bmp	Splash screen bitmap displayed when you launch the PowerCenter Workflow Manager and in the About dialog box when you click Help > About <tool name> in the Workflow Manager.
	url_<locale>.txt	URL displayed in the About dialog box when you click Help > About <tool name> in the PowerCenter Client tools. Create a text file and include the URL to be displayed in the About dialog box. You must prepend http:// to the URL in the text file.
	eula_<locale>.txt	End user license agreement displayed in the About

		<p>dialog box when you click Help &gt; About &lt;tool name&gt; in the PowerCenter Client tools.</p> <p>Create a text file and include the text from the end user license agreement contained in the email message that contains the download instructions and license key file.</p>
	oemname_<locale>.txt	<p>OEM partner name displayed in the title bar for the PowerCenter Client tools.</p> <p>Create a text file that contains the OEM partner name.</p>
Server\Disk1\InstData\oem	eula_<locale>.txt	End user license agreement displayed in log event files in the PowerCenter Administration Console.
	oemname_<locale>.txt	OEM partner name displayed in log events in the PowerCenter Administration Console.

Complete the following tasks to customize the PowerCenter Client tools with OEM partner-specific information:

1. Download the PowerCenter installer from the FTP site.
2. Unzip or untar the PowerCenter installer.
3. Create an oem directory under the Client\Disk1\InstaData directory and copy or create the necessary files in the oem directory.
4. Create an oem directory under the Server Disk1\InstaData directory and copy or create the necessary files in the oem directory.
5. Create the final DVD image for the PowerCenter installer.

After you install PowerCenter, the OEM partner-specific information displays in the correct location.
